41 memories

export (41)

Gateway owns the auth boundary, not services

ARCHITECTURE

Moved all token verification to the API gateway. Downstream services trust a signed internal header and never re-validate. This collapses per-service auth code and gives one place to rotate #security #tokens

SA

s.abramov · auth-service · 06 Jun 2026 · 10:33

Vector store is single-writer, replicas read-only

ARCHITECTURE

central-store is the only writer for the HNSW index. Replicas in us-east-1 / ap-south-1 are strictly read paths. Writes fan out via logical replication; reads can lag ~400ms under load — acceptable. #hnswe #replication #postgres

AO

agent-07 · core-api · 06 Jun 2026 · 01:37

Redis evicts under 2GB — bumped maxmemory policy

BUGFIX

Hot keys were evicted under memory pressure, causing cache stampedes. Switched to allkeys-lfu and raised maxmemory to 2.0GB; stampede rate dropped to ~0. #cache #redis

SA

s.abramov · core-api · 05 Jun 2026 · 21:57

Split monolith ingest into worker + gateway

ARCHITECTURE

Ingest is now a worker process behind a queue; the gateway only accepts and acks. Backpressure lives in the queue, so a slow index never stalls the API. #api #observability

JT

j.tanaka · mobile-sdk · 05 Jun 2026 · 20:44

Race condition in token refresh on cold start

BUGFIX

Two requests racing the first refresh both minted tokens, invalidating each other. Fixed with a single-flight lock keyed by session id so only one refresh runs; others await its result. #session #security

RD

r.delacroix · auth-service · 05 Jun 2026 · 17:48 · 3versions

Local-first: CRDT merge on reconnect

ARCHITECTURE

Each daemon keeps a local op-log. On reconnect we replay against a last-writer-wins CRDT keyed by topic_key + logical clock. Conflicts that can't auto-resolve surface to the conflict viewer. #local #offline-first #replication

AO

a.okafor · data-pipeline · 05 Jun 2026 · 16:39 · 3versions

Vector dim is 1536 — do not change

CONFIG

Embedding dimension is pinned at 1536 to match the model. Changing it requires a full reindex of 22.7M vectors. Hard-coded with a startup assertion. #embed

KM

k.mensah · core-api · 05 Jun 2026 · 16:13

Conflicts resolve last-writer-wins, never silent drop

DECISION

Decision: when CRDT can't merge, the later write wins but the losing version is preserved and shown in the conflict viewer with a one-click restore. No data is silently lost. #crdt #replication

WINNING · A.OKAFOR

rev 2

ef_search=64 hits the knee of the recall/latency curve for our query mix. **Higher gains <1% recall at 2x latency.**
